

## 365 MULTI-TENANT MANAGER FOR MSPS

AUTOMATE

STANDARDIZE

GOVERN

Managing M365 tenants is a resource-hogging task, with service providers spending several hours trying to juggle multiple admin portals to configure their customers. Configuring M365 tenants is a highly detailed and complex task, and simply knowing how to configure them isn't enough – service providers must also maintain tight security and keep risks at bay. Multiply all this across diverse tenant needs for different customers, and the problem very quickly grows into a mountain that can be overwhelming.

## MANAGING MICROSOFT 365 TENANTS MADE AS EASY AS IT GETS

HOW CAN **365 MULTI-TENANT MANAGER FOR MSPS** HELP YOU MANAGE ALL MICRO-SOFT 365 TENANTS?

**Automate** – Automatic discovery of M365 tenants leveraging Microsoft Partner Center connection.

**Standardize** – Out-of-the-box templates, settings, and policies with the flexibility to fully customize your own configurations.

**Govern** – Detailed dashboarding for comprehensive analysis and call to action for all managed tenants.

**Effortless management, governance, and compliance for all M365 tenants.**

## 365 MULTI-TENANT MANAGER FOR MSPS

# 365 MULTI-TENANT MANAGER FOR MSPS FEATURES

**Automatic discovery of M365 tenants leveraging Microsoft Partner Center connection**, to facilitate the provisioning and streamlining of services.

**Elimination of managing multiple Microsoft portals.** With 365 Multi-Tenant Manager for MSPs, **a tenant can be managed from one consolidated solution through a single pane of glass.**

**Simplification and standardization** of otherwise complex workflows and inter-portal dependencies in Microsoft Azure/M365 administration.

**User-friendly wizards** that guide service providers from tenant onboarding to tenant configuration, customization, and monitoring of automated tasks.

**Out-of-the-box settings, policies and templates** that every organization can quickly adopt.

**Built-in toolbox support** for creation of custom settings and policies, and importing of tenant policies, ensuring that MSPs can meet each customer's unique needs within their M365 tenant.

**Automatic remediation and enforcement** when non-compliance is detected.

**Extensive dashboards** for monitoring and reporting purposes.

**Detailed dashboarding** functionality for **comprehensive analysis and call to action** for all managed tenants and their compliance states.

**Account Activity Log:** Detailed, auditable record of all user actions impacting partner configurations and tenant operations. All actions can be tracked to the responsible individual with a timestamp, helping identify potential issues and facilitating effective troubleshooting by determining how changes to live tenants were implemented within 365 Multi-Tenant Manager for MSPs.

**Centralized hub for report generation and scheduling:** Generate on-demand or schedule automatic reports for in-depth analysis, troubleshooting, or information showcasing. Reports can be generated via API endpoints, allowing for automated monitoring and ticket creations, as well as integration into Remote Monitoring and Management Software.
